Abstract

The UH Applied Research Laboratory (ARL) was founded as the fifth of five Navy-sponsored University Affiliated Research Centers in 2007. Originally established to focus on the ocean environment, astronomy, remote sensing and command/control and communications, the ARL has recently added renewable energy and cyber security to its portfolio of responsibilities. This presentation will briefly describe the history of the ARL and some of its projects, current and future partnerships with the Department of Defense and other federal funding agencies, and discuss plans for the future of the laboratory.
